### Abstract

The development of computer applications has influenced the needs of modern society. Various facilities can be used from the applications that are available. The use of computer applications has grown rapidly both in the form of web online and online android. The ease of application has been widely used by the community, government and private institutions. Applications have also been used in the transportation sector in realizing a smart city. The problem that is often faced by the community is the need for easy and inexpensive parking applications. This study aims to determine the need for applications that can be used by the community easily. The use of applications can also facilitate continuous parking management as well as cost efficiency. The method is carried out by conducting interviews with the community. It is hoped that the study can produce an effective parking management application to support a smart city and its residents.
