

the implementation of misload sensor and single press plate implementation at auto loader was successfully implemented. The improvement was done on all the loading machine at production floor. The root cause of the sliver defect had successfully determined. 40X inspection removal will be done after confirming no sliver from all the 50 lots loaded in the loaders equipped with misload sensor module which will definitely help to improve the overall cycle time by 9 hours of reduction. Corrective actions to solve this quality problem has been suggested and implemented. The solution has gained huge customer trust during Continuous Improvement Plan activity sharing with them.

Biography / Biographies

Assoc. Prof. Dr. Norzima Zulkifli is currently attached with Department of Mechanical and Manufacturing Engineering, Faculty of Engineering, Universiti Putra Malaysia. She is in charge of the Master Program in Engineering Management in the university. Previously, she has worked with Standards and Research Institute of Malaysia (SIRIM) during which she dealt with many small and medium industries. Her areas of interest include small and medium industries, industrial engineering, quality and manufacturing management.

Haresh Kumar Shanmugam completed his Bachelor's of Degree in Mechatronics Engineering from University of Selangor in year 2012 and completed his masters degree from UPM in 2017. Haresh has been attached to Burn-in service industry for past 5 years in process field. He was given a role to manage 80% of the process in the factory from front end to backend process. He has done many projects and all the projects was documented in Quality System.
