

demand rate, partial backlogging and Weibull deterioration rate. *European Journal of Operational Research*, 192, 79-92.

TSAO, Y.-C. 2016. Joint location, inventory, and preservation decisions for non-instantaneous deterioration items under delay in payments. *International Journal of Systems Science*, 47, 572-585.

Biographies

Yuncheol Kang is an Assistant Professor in Industrial Engineering at Hongik University, Seoul, Republic of Korea. His research interests include decision-making problems and the use of information technology in a variety of industrial domains including logistics, supply chain and health care. He was a Research Associate in Industrial and Manufacturing Engineering at the Pennsylvania State University from Sep/2014 to Feb/2016. He received a PhD in Industrial Engineering in 2014 from Pennsylvania State University, and an M.S. in Industrial Engineering in 2004 from the Seoul National University. Between his M.S. and Ph.D. studies, he was a system designer at LG CNS, Seoul, Republic of Korea and a researcher at Automation and Systems Research Institute, Seoul National University, Seoul, Republic of Korea. He also received a B.S. in Industrial Engineering from KAIST in 2002.

Muhammad Waqas Iqbal is a post-doctoral researcher in the department of Industrial Engineering at Hongik University, South Korea. He earned his PhD from Hanyang University, South Korea in Industrial & Management Engineering in 2018 and received Best Thesis Award. He has earned B.Sc. Engineering degree in Textiles from National Textile University, Pakistan in 2010. He has won prestigious scholarship from Higher Education Commission, Pakistan to pursue Masters and PhD studies in Industrial & Management engineering (2014-2018). He is an active researcher in the field of primary and secondary supply chain systems, and preservation policies for deteriorating products. His research has been published in famous journals of Industrial Engineering. His areas of interest include, Supply Chain Management, Operations Research, Non-linear programming, Optimization, Inventory Management, Production Planning and Control, Reverse Logistics, and Preservation Policies in supply chains.
