Biographies

Pedro A. Díaz Leyva is an industrial engineer graduated from the University of Holguin. He was a professor in the Department of Industrial Engineering at the same university. He has a master's degree in “Computer-aided design / computer-aided manufacturing” (CAD/CAM). He is currently an insurance material specialist in the Company BRASCUBA Cigarrillos SA. He led investigations related to the supply chains management and commercial management. He has participated in different national and international events, international scientific conferences and workshops related to industrial engineering. His investigation line is related with the productive processes optimization through the application of mathematical tools such as computer-aided process simulation.

Claudia A. Díaz Leyva is an engineer professor in the Department of Industrial Engineering at the University of Holguin. She achieved a university degree in Industrial Engineering at the University of Holguín and is currently studying in the Master's program of Industrial Engineering at same University. She has participated in several national and international events. She has conducted research in different companies in the territory. Her research interests include human factor engineering, ergonomics and health and safety at work, human resources management and the evaluation of the impact of training.

Aylín Pupo Pérez is an engineer professor in the Department of Industrial Engineering at the University of Holguin. He achieved a university degree in Industrial Engineering at the University of Holguín and is currently studying in the Master's program of Industrial Engineering at same University. She has participated in several national and international events. Her research interests include Her research interests include management, process management, operations research, logistic and risks.

Mayly Torres Álvarez is graduated in Industrial Engineering from the University of Holguín is a professor of the discipline of “Engineering of the human factor" of the Industrial Engineering Department at the same university. Her fundamental field of professional work is internal control in the companies and strategic foresight.
