Biographies

Gustavo Alvarez-Coello. Automotive engineer from Universidad del Azuay, Ecuador (2012). Master in automotive engineering at Tecnológico de Monterrey, Mexico (2014). Currently, associate professor at Universidad del Azuay and works as researcher of the ERGON - Automotive Engineering Research and Development Center. Has worked in projects related to energy evaluation, air pollution and sustainable transport and mobility with private companies and governmental institutions. Has graduated 2 MSc. and 7 undergraduate students.

Mateo Coello-Salcedo. Coello holds a bachelor's degree in Automotive Mechanical Engineering from the Universidad del Azuay and a Master's Degree in Planning and Energy Management from the Universidad de Cuenca, Ecuador. His research interests include the study of vehicular impacts as they relate to energy demands, generation of emissions through indirect estimation software, as well as the evaluation of alternative means of transport.

Andrés López-Hidalgo. Lopez holds a bachelor's degree in Automotive Mechanical Engineering from the Universidad del Azuay, a Master's Degree in Alternative Internal Combustion Engines, and a Ph.D. in Propulsive Systems in Transportation Media – both from the Universidad Politécnica de Valencia-Department of Thermal Engines and Machines. He is currently the Dean of the Faculty of Science and Technology of the University of Azuay, in Cuenca, Ecuador. His research interests include internal combustion engines and turbochargers.

Santiago Ordoñez-Luna. Ordoñez holds a bachelor's degree in Automotive Mechanical Engineering at the Universidad del Azuay. He is currently teaching at the Provincial Drivers Union of Loja, in Loja, Ecuador. He is also an automotive technician at Tecnicentro del Austro SA (TEDASA) in Loja.
