Healthy Food Zone

my topic: Education and healthy food
I choose this topic because school closure has been the biggest effect of 2016/17 in the educational system

Social: kids who are overweight or not the same as others gets picked on and may not want to come to school

Political: the resources used to provide food is an issue that the government has to deal with.

Economic: this health issue not only effects students but it also effect the economy, because it messing with everyone's health including the medical exchanges.

Data Diagram
CDC estimates that K-12 students in the U.S. miss 38 million school days each year due to influenza alone, while tens of millions more are lost due to colds and other infectious diseases.

Case study : Detroit Food Academy
Why I choose this study: I chose this case study because it provides lots of informational information about health.

Three key lessons learned about study:
- Small Batch Detroit is a social enterprise subsidiary featuring products designed and crafted by Detroit Food Academy high school students. In addition to bringing tasty healthy products into the world
- A school-year leadership development program for young Detroiters that culminates in the design and launch of students' own triple-bottom-line (people, planet, profit) food business.
- After successfully premiering their food business at Market Day, students have the opportunity to launch, operate, and refine their business at Detroit farmers' markets and grocery stores.

schematic design
Below is a floor plan indicating how my design for the bus shelter can provide health resources for students

final design

Percentage of high school students who had obesity/2015

Eating Habits Indicators from a Survey of DPS Students
